vim-dn-markdown

A vim markdown ftplugin providing some output (re)generation and viewing options. Can generate and view docx, epub, html and pdf output.

Requires

Pandoc: To generate output files.

Latex: To generate pdf output files. Can use xelatex (default), lualatex or pdflatex engines.

Vim plugin: dn-utils.

System default viewers: Output files are displayed using default system applications for each file type.

Further documentation

See ftplugin documentation.

Credit

The ftplugin includes a default stylesheet for incorporation into html output files. This style file is a thin wrapping of Ryan Gray's buttondown css stylesheet hosted at github.
